Hello,
i have Trouble with the expires-property from an authentication-cookie.

I create an authenticationcookie and make the change of the expire-property to 2 hours, before the redirect to the refferer URL started. Anyhow the expiredate from the cookie on the client is 50 years in the future. In the tracing-mode I can see, that the authenticationcookie has an expire-date 50 years in the Future. After that I recall the cookie as http-cookie, change the expiretime onto 2 hours an start at the end the redirect. That all makes no Changes to the cookie on the client – there I find a cookie with an expire-date 50 years into the future.

I dont know the mistake, can everybody give me an hint?

Thank you,

Steffen Grau
