Hi All,

I have an ASP.NET application running on <http://xx.xxx.xxxx.xx/aspApplication> and I have a domain <http://www.mydomain.com> registered at godaddy.com for this application. I have setup domain forwarding at goDaddy.com to forward to <http://xx.xxx.xxxx.xx/aspApplication>. I am using Forms Authentication on the application. Now the problem i am facing is , when i login to the application through <http://xx.xxx.xxxx.xx/aspApplication> everything works fine and get authenticated and logged in. But when I login in through <http://www.mydomain.com> , the cookie gets blocked and I am prevented from logging in(i am not getting authenticated).

The path in the web.config file is pointed to path="/".

Any help appreciated.
