Hi Ken, thanks for the reply.

No, I'm not using any basic authentication and prompting the user for the name/password. I'm trying to grab what they've already logged into the network with. This was a piece of cake in classic ASP, but I'm still having difficulties getting this to work.

I also have under IIS the directory listed as an application, not as a virtual directory. Is there any other information I can provide you?

Thanks —
