

FormsAuthentication.GetRedirectUrl() returns only first parameter

It appears that FormsAuthentication.GetRedirectUrl() only returns the first parameter for the original target URL. For example, if the original target URL is:

`/MyPage.aspx?a=b&c=d`

and the user is redirected to the login page, a call to FormsAuthentication.GetRedirectUrl() in the login page returns:

`/MyPage.aspx?a=b`

Any ideas as to why this may be?

Thanks,

Brian Adkins
