Hi John,

Thanks for your followup. Since the KB article doesn't quite suite your situation, we need to do some further troubleshoot in it. Would you please try the follow tests:

1. Create a simple web project and just contain on page and put the requesting remote xml stream operation in the page and to see whether the project will also suffer the problem.

2. Try create a simple local(intranet) web app on another server which can return a xml stream. And query the xml stream from the intranet server to see whether this will also cause the problem.

As for setting the internet accessing security, I still think you may have a further check the configuration mentioned in the kb(using the .net configuration tool).

Please check out the above items. If you got any updates or new findings, please feel free to post here.

Regards,

Steven Cheng
