

Who am I impersonating?

Is there a way I can get the user of the identity I will be impersonating to get network resources?

I know `WindowsIdentity.GetCurrent().Name` for the person coming into the ASP.NET app but I want to do some testing of different combinations of impersonating based on Anon, Windows Auth, and `impersonate = true` in `web.config`. So I am looking for the identity that will be used for the ASP.NET app to go to a network resource.

thanks,
Gar
