I *think* you can tell what role the user currently has with
User.IsInRole("")

so something like

```
private String enumUserRoles()
{
    String strReturn = "";

    if (User.IsInRole("vip")) strReturn = "vip";
    if (User.IsInRole("mov") && strReturn == "") strReturn = "mov";
    else if (User.IsInRole("mov") && strReturn != "") strReturn += ", mov";

    return strReturn;
}
```

the else statement is in case the user somehow has both roles.
