

Getting forms auth challenge

Source:

I'm implementing forms authentication on a site and can't get the redirection to the login page to work happen. It is behaving as though still doing windows authentication.

In web.config:

```
<authentication mode="Forms">
  <forms loginUrl="login.aspx" name=".ASPXFORMSAUTH"
protection="All"/>
</authentication>
```

```
<!-- AUTHORIZATION
  This section sets the authorization policies of the
application. You can allow or deny access
  to application resources by user or role. Wildcards: "*"
mean everyone, "?" means anonymous
  (unauthenticated) users.
-->
```

```
<authorization>
  <allow users="*" /> <!-- Allow all users -->
  <!-- <allow users="[comma separated list of users]"
    roles="[comma separated list of roles]"/>
  <deny users="[comma separated list of users]"
    roles="[comma separated list of roles]"/>
  -->
</authorization>
```

Am I missing something?

Thanks in advance, Mark
