Hi Joe,

If i use this web config file:-

```
<authorization>
  <deny users="?"/>
  <allow users="*/>
</authorization>
```

Can i control the GROUPS the users would be able to validate against the Active Directory? For example if i allow only members in a security group in the Active Directory to authenticate and deny the others. Would it work?

Check this link at :-

http://msdn.microsoft.com/library/default.asp?url=/library/en-us/sds/sds/active_directory_authentication_from_asp__net.asp

Thanks
