Hi,

You need to put the locationpath tag outside the system.web tag in your web.config.

your web.config stars like this

```
<?xml version="1.0" encoding="utf-8" ?>
<configuration>
<system.web>
```

```
// here you specify the authentication mode
```

```
</system.web>
```

```
//here you need to put the location path tag
```

```
<location path="ProtectedPage.aspx">
  <system.web>
    <authorization>
      <deny users="?" />
      <deny users="sa" />
    </authorization>
  </system.web>
</location>
```

Notice that the above tag set themselves have a system.web tag. so they need to be outside the original <system.web>... </system.web> tags. in your web.config file.
