Hi,

I am using windows integrated authentication on my intranet. How do I check if a user is a member of a group in active directory. I have the foll test code but it's not working

```
Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles Button1.Click
```

```
    If User.IsInRole("USA\Administrators") Then
```

```
        TextBox2.Text = ("Role: Administrator").ToString
```

```
    Else
```

```
        TextBox2.Text = ("Unable to check Role").ToString
```

```
    End If
```

```
End Sub
```

note: usa is name of my domain

I get the second message "Unable to check Role". The Windows Authentication works great. If i use

```
    TextBox1.Text = User.Identity.Name
```

I get the correct logged on user. The only problem here is checking the role/group in active directory.

Thanks
