Hi,

I am trying to implement Single Sign On solution to my web applications.

I have developed a web application which does authentication and it is SSL based.

I am having a problem when redirecting to the requested web site(http based) after authentication (https based)

Let us say I have

Site A – An application (configured to do forms authentication on Site B)

Site B – An application which does authentication which is https based

I try to redirect in site B using,

```
System.Web.Security.FormsAuthentication.RedirectFromLoginPage("test", False)
```

It works but one problem.

After Authentication the Site B tries to redirect to the application A but still uses https and not http as expected.

I appreciated your help,

–Holy
