- ✘ Hi,
- ✘ I want to run the batch file from the asp.net
- ✘ web(intranet)application. The batch files works fine if it has some
- ✘ copy or del command, eventhough i could not see the command window.
- ✘ But if the batch file has some application for e.g., Notepad,it seems
- ✘ to open the notepad as i could see it running in the task manager, but
- ✘ the application hangs. But if i give exit after some time, the
- ✘ application exits but the process for notepad still running in the
- ✘ task manager and does nothing.
- ✘
- ✘ I could run the same code in the windows vb.net application, it works
- ✘ fine. Do i need to set any additional privileges to the user account
- ✘ to run the application in the batch file.
- ✘
- ✘ To be more clear, i am using Integrated authentication for windows and
- ✘ impersonation identity= true . Could anyone please share with me your
- ✘ ideas if u have done anything similar of this kind...
- ✘

You don't typically run a program with a user interface from an ASP or ASP.NET server side application. The application runs on the server and you cannot interact with it from the browser side client.
