Hi Guys,

So what does :-

Response.Redirect(FormsAuthentication.GetRedirectUrl(txtUsername.Text, false))
do.

When i use it it redirects me to default.aspx(Which i guess it returns the default/webform1.aspx which is set as start page).

I have my timeout in web.config set to 2.

Why doesn't my page i logged into expire after 2 minutes!

And again after login in i have a button for SignOut(below)

But after clicking that i can still see a page thats under that directory when its suppose to redirect me to a login page!

Sub SignOut(objSender As Object, objArgs As EventArgs)

'delete the users auth cookie and sign out

System.Web.Security.FormsAuthentication.SignOut()

Session.Abandon()

'redirect the user to their referring page

Response.Redirect("default.aspx")

Any kind of advice needed!
