I have a feeling you're gonna say no but, is there any way, with ASP.NET Forms-Based Authentication, to protect access to NON ASP.NET objects? For example, if I have a directory that has .ASPX files AND, say, JPEG files (.jpg), it would appear that if the user has the URL to one of the JPEGs, he can still come back any time and download it without being sent to the Login page. I assume this is because, for a JPEG file, ASP.NET is not involved at all in the whole IIS loop.

Right?

Alex
