Hi everybody,

I made my first ASP.Net application and deployed it.

There came an error on the server:

What may be wrong in web.config file , or do I have to put it on to the root of my site.

Thanks for any help.

Arif Çimen.

Server Error in '/' Application.

Configuration Error

Description: An error occurred during the processing of a configuration file required to service this request. Please review the specific error details below and modify your configuration file appropriately.

Parser Error Message: It is an error to use a section registered as allowDefinition='MachineToApplication' beyond application level. This error can be caused by a virtual directory not being configured as an application in IIS.

Source Error:

Line 35: by Microsoft that offers a single logon and core profile services for member sites.

Line 36: -->

Line 37: <authentication mode="Forms" />

Line 38: <!-- AUTHORIZATION Windows

Line 39: This section sets the authorization policies of the application. You can allow or deny access
