- ✘ When I move the app to a Windows 2003 server and repeat these setting, I do
- ✘ not get a value for User.Identity.Name. Is there an addition setting or
- ✘ settings on a Windows 2003?
- ✘

Did you disable Anonymous access for the web app on the Windows 2003 server?

Did you give the Anonymous user access in the <authorization> section of the Web.config file?

You may want to check the following MS KB article:

<http://support.microsoft.com/?id=306359>
