✂ Hi,

✂

✂ I wanted to use impersonation in an asp.net web service application.

✂ The following line was added to the web.config:

✂ <identity impersonate="true" userName="user" password="12345"/>

✂

✂ If the user is not added to the administrators group of the computer it

✂ won't work. \

✂ Is there a better solution beside adding the user to the administrators

✂ group?

Could you be a bit more specific? What is it that "won't work"?

Paul
