In my web application i am reading the data from excel file and inserting the records into the database.(In ASP.net C#)

for some users i am getting exception "Access denied" at the following line of the code.

```
Excel.Application=new Excel.Application();
```

for some user it is working fine.

In IIS -->properties-->directory security-->Authentication mode is "Integrated Authentication" , needed to find the login id of the user.

Web.config file identity impersonate option is also true.

How can i avoid this error message?

Please help...Thanks to all of you for investing the time and replying.
