Hi,

set the trust level to medium on your development machine to figure out what is going wrong..

Stuff like Win32 APIs, COM, EventLog, Registry, File Access outside the web dir is a no go in medium trust (amongst many other things).

Dominick Baier - DevelopMentor
<http://www.leastprivilege.com>

```
Hello everybody,  
I have developed a asp.net application, it is running fine in  
developmnet  
environment. But when I deploy it on hosting server, the following  
error  
message was displaying during browsing the site:
```

```
-----  
Security Exception  
Description: The application attempted to perform an operation not  
allowed  
by the security policy. To grant this application the required  
permission  
please contact your system administrator or change the application's  
trust  
level in the configuration file.  
Exception Details: System.Security.SecurityException: Request failed.  
-----
```

```
-----  
Then I contacted to hosting support they said their sever is  
configured to  
trust level medium.  
If I added following lines in my web.config:
```

```
<trust level="Full" originUrl="" />
```

Re: Urgent: Error While deploying ASP.net application

Then it is not allowed because the hosters has set this setting in machine.config <location allowOverride="false">

So Please suggest me that how can I run my ASP.net site on hosting server in medium trust level.
