Hi Dominick,

Actually I am using MySQL database using MySQL ODBC 3.51 Driver. I have set trust level to medium on on development machine and found that the pages which are not using database interaction are displaying but pages which interacting with database are giving security error issue. Here I am pasting the stack trace, my database name is quotation:

Stack Trace:

```
[SecurityException: Request failed.]
Quotation.QuoteDatabase..ctor() +0
Quotation._default..ctor() in index.aspx.vb:7
ASP.index_aspx..ctor()
-----
```

I think the trust level medium does not allow database interaction through ODBC driver.

Please give me suggestion, what should I do next.....?
