Hi ,

you are right - ODBC won't work in medium trust.

I think the only db provider that works by default is SQL Server.

Get a server where you have full trust...

Hi Dominick,  
Actually I am using MySQL database using MySQL ODBC 3.51 Driver. I have set trust level to medium on on development machine and found that the pages which are not using database interaction are displaying but pages which interacting with database are giving security error issue. Here I am pasting the stack trace, my database name is quotation:  
-----

Stack Trace:  
[SecurityException: Request failed.]  
Quotation.QuoteDatabase..ctor() +0  
Quotation.\_default..ctor() in index.aspx.vb:7  
ASP.index\_aspx..ctor()  
-----

I think the trust level medium does not allow database interaction through ODBC driver.

## Re: Urgent: Error While deploying ASP.net application

Please give me suggestion, what should I do next.....?

Hi,

set the trust level to medium on your development machine to figure out what is going wrong..

Stuff like Win32 APIs, COM, EventLog, Registry, File Access outside the web dir is a no go in medium trust (amongst many other things).

Hello everybody,  
I have developed a asp.net application, it is running fine in developmnet environment. But when I deploy it on hosting server, the following error message was displaying during browsing the site:

-----  
Security Exception  
Descript
