Hi ,

in 2.0 you have the possibility to pass headers from asp.net to asp - not sure if IIS will pick up these header to do auth - never tried it.

I don't see a possibility in 1.1 - sorry

Thanks anyway for trying...

Do you think there could be a way to 'wrap' an asp.net site around the asp site (Web2), such that the wrapper uses forms auth., but it then passes windows credentials to the 'wrapped' asp?

Thanks ,  
Chumma
