Hi,

Does anyone know how to duplicate  
AspCrypt's function using .NET framework?

I have an existing ASP application  
that use AspCrypt to encrypt  
employees' password.  
Now I'm moving to ASP.NET  
but need to continue using old data.  
I don't know actually which encryption  
algorithm AspCrypt uses.  
Just know that it uses the same  
algorithm as UNIX does.  
I have tried MD5, DES, Rijndael  
in .NET but they're all produce the result  
that doesn't look like ones from AspCrypt.

I've also tried to wrap AspCrypt COM.  
But face another problem.  
It seems to make the other COMs stop working  
once I executed AspCrypt object.  
It also doesn't have dispose method  
so I cannot get rid of it after use.

Any clues?

Regards,  
Panya
