Is there a way to use the website administration tool from the hosting server instead of localhost? I need a way for my client to be able to maintain members and roles and they obviously won't be using Visual Studio.

Any suggestions would be appreciated.

Thanks!

I wrote an Article on MSDN about this.

I had the same problem and did not see a solution. Microsoft published it because they see it as a good solution. There is a way to make the app built into visual studio work on IIS but it creates security concerns. According to MS, it does not prevent cross domain type attacks.

Good Luck.
