Hi Like (and Khaled)

Well unfortunately we could not wait any longer and the box was rebuilt before I could resolve this issue.

Upon reloading the site from the development XP machine (which has always worked) the production site functions as expected with the correct redirect.

Thank you Luke for your attempts to resolve the issue and Khaled, sounds like you have a problem in your code if none of the platforms work. In my case the development platform functioned correctly but when shipping the login page and executable to the production environment failed, this said to me the code was fine.

Do what Luke suggested and create a new simple project aspnet authentication project and see if that functions in your test environment. If it does then you need to look deeper into your code. You might further prove the code by shipping the aspx and assembly to another machine and trying it there.

Any resolution to this issue? I have a similar problem: developing a web app in VS 2005 using forms authentication. My dev box is win XP and the app is in c#. Forms authentication used to work just fine on my dev box. Recently, the login page is not redirecting to the return URL, and I keep getting the login page back. I have a directory in the app with all the pages that require login. The directory as well as the login page are defined in web.config. Last version of the app is deployed to a win2003 server is working fine there. Now, I can't deploy the latest version until I fix forms authentication on my dev box and figure out what's going on?

Re: Forms Authentication – Sudden Redirect Failure on Login

The code is very similar to Stephen's and the debug statements yield similar values. Sounds like an environment issue but I can't figure out what has happened. What do you guys think. Thanks, Khaled.

Luke Zhang [MSFT] wrote:

To confirm if this is .NET framework issue, you may first try to re-register the ASP.NET on the server:

Aspnet_regiis -ua

and then:

Aspnet_regiis -i

For more details on Aspnet_regiis:

<http://www.microsoft.com/technet/prodtechnol/WindowsServer2003/Library/IIS/1f74eac5-9005-4f91-9137-f63b73eefde8.msp?mfr=true>

And you also can try to repair the framework:

<http://support.microsoft.com/?scid=kb;en-us:306160>

Sincerely,

Luke Zhang
