Hello,

this is because only those files are protected by the web.config settings which are handled by the ASP.NET runtime.

If you want to protect .mp3 and other types also, you can map those extensions to the .net runtime ISAPI filter.

Best regards,
Henning Krause

Dear all,

I have been reading some example on how to protect a folder via web.config file. The question is that I wish to protect an audio directory which contains various audio files (mp3, wav, mov, etc.) and the web.config folder protection does not protect these file format. How am I going to do that?

Thanks all in advance.

Hello,

Is there another way of easily protect non-asp files? Extending ISAPI.dll is not as easy as it first thought.... Is there something I can specify in web.config file instead?

.
