This problem has been posted before, does anyone have a solution?

I am unable to add users using the Web Site Administration Tool. I can create and delete roles, but when I try to add a user I get an Error:

An error was encountered. Please return to the previous page and try again

I get the same error when I click on "use the Security Setup Wizard to configure security step by step" link

I can see the created Roles in SQL server 2005

.
