Have you applied the patch with MS02-18? This is a known issue that is supposed to be fixed in that patch.

As for a workaround, you need to set RemoveServerHeader=0 in the URLScan.ini file.

Check out KB article #Q316864

<http://support.microsoft.com/default.aspx?scid=kb:en-us:Q316864>

If your problem is still not fixed and you have MS02-18 applied, PLEASE post back here. I am running into a related problem with Windows Media (.asf) files and am interested in any other input people might have.
