Minor detail with running adsutil. It is a VBScript (extension .VBS) and it needs to be run by CSCRIPT. WScript is the default script execution engine on Windows Server, so you need to run:

If you run CSCRIPT //h:CSCRIPT that will set CSCRIPT as the default script engine. In that case, what Thomas gives will work.

Otherwise, you must run:

CSCRIPT %SYSTEMDRIVE%\inetpub\adminscripts\adsutil.vbs <command> <param1>...

Stephane,

is the machine member of a domain and does the domain apply group policy? It seems that a group policy takes away the "logon locally" right from the IUSR account. This right is needed for IIS to logon the anonymous user though. Either you ask your domain admin to exclude the IIS machine from the group policy or you change the way IIS logs on the anonymous user. There is no UI to change the logon method. You would have to do it via script, e.g. c:\inetpub\adminscripts\adsutil set w3svc/logonmethod 3 This changes the logonmethod to "NETWORK\_CLEARTEXT" which is default in IIS 6.0.

If it doesn't work you can reset this by entering the following command:

c:\inetpub\adminscripts\adsutil delete w3svc/logonmethod

Hope this helps.
