In article <eMYMqiDvCHA.440@TK2MSFTNGP12>, levinson_k@excite.com says...

> *This should work fine. Have you tried enabling auditing on both machines to
> see what account is being denied access to where?*

Yep, the NAS does not record any attempt to access it by the FSO. There is no log in anything that indicates the FSO even tried to get to the NAS. I've enabled all security auditing features – it appears as though the FSO uses some computer account, and since the computer/NAS are not part of the same network there is no auth. for it to access the NAS.

Most articles cover same domain.

Been here, done this 8 ways to Sunday – in fact two other admins have tried this before me.

Since they two devices are not in the same AD/Domain, and the FSO can not be specified as using a user account, it's not possible from what I can see.
