In article <eDOKhNX8CHA.1512@TK2MSFTNGP12.phx.gbl>, cdmsf01@attglobal.net says...

> *I would like to be able to provide links on a web page to Word documents on an IIS 5.0 web server. I would like to be able to hit the link and have the document open in the browser window. This application is a corporate intranet and all clients will have Office 2000 loaded locally.*

>

> *My problem is as follows:*

>

> *When the user hits the link, the document is displayed in the browser as expected. However, if they hit the back button, they are asked for a userid and password. They can hit cancel and continue.*

>

> *I can give full access to the IUSR account and this works fine. However, the site is then open for anyone to publish to.*

>

> *Any ideas? Is this a known bug?*

>

> *Thanks.*

>

> *When the user hits the link, the docu*

I hate when corporate sites do this – Convert the documents to PDF and distribute them that way.

There are not to many documents that have to stay in Word format for distribution.
