Err. since you still having this prob and you claimed you have followed every single step in the kb, I suggest you remove all ftp sites and folders.

Do it from scratch.

ftproot -> c:\ftproot\

-Administrators: Full Control

-Everyone: Read

-System: Read

userA -> c:\ftproot\userA

-Remove the Everyone group.

-Change the System account's folder's access to Full Control (instead of Read).

-Add the user who will use that folder, and give that user Full Control access.

Ensure userA has logon locally rights and etc

Then test it at localhost - ftp localhost

any luck ?
