If you enter a username/password three times, you should see an error message and an error code, probably a 401.something. The following article may help you figure out what's going on:

318380 IIS Status Codes

<http://support.microsoft.com/?id=318380>

Most likely it will be a 401.3, Access denied due to ACL on resource, indicating that either your NTFS permissions or logon rights are not correct. Can you log in using an administrator account, or do all accounts fail? What do the NTFS permissions look like on the files you're trying to access?

Lisa
