>Hello,

>

>I'm having issues with security, if any body can help me

>I'd like to thank you ahead of time. I'm using IIS 6.0

>and have an ASP web application that uses microsoft

>access. After copying the web application to the wwwroot

>directory and try to add or modify the contents of the

>database with an asp web form, I get the following error:

>

>Microsoft JET Database Engine error '80040e09'

>Cannot update. Database or object is read-only.

>

>I'm also getting a couple of other errors aslo:

>

>Object Moved (this happens with netscape 4)

>Object or file already in use.

>

>When I try to open the access database in access it

>states that the database is read only. When I check the

>permissions on the file I see that the read only

checkbox

>is **UNCHECKED!**

>

>Can anyone please help me on how I should set up the

NTFS

>permissions and IIS permissions correctly so I can avoid

>these errors.

>

>Thanks,

>

>

>Dont know if this will help, but try and uploading the

ACCESS Lock file. into the same directory as the .mdb

file. I think thats how i solved it.
