New to Advance Server.

Just installed w2k adv server and have a problem now,I configure it as a IIS,I put some .exe files under wwwroot folder for user downloading,but user can't download these .exe files from this server.

The error is "The page cannot be found",but can download any other type file,eg .zip,.pdf ... I read some article from web,check the URLScan.ini file and make the .exe be allowable,then still doesn't work but notice that Urllogfile didn't log .exe reject transactions any more,so there must be another place block the downloading.The new error message is "HTTP status code 401 : Unauthorized",web browser displays "The page cannot be displayed".

I installed service package 3,latest hotfix,IIS lockdown tools,Microsoft Baseline Security Analyzer.

Appreciate for any suggestion.

Jinqing
