SUS is on a member server. All member and domain servers in the domain are now downloading updates by SUS but client PC's are not able to. The clients are trying to connect to SUS thus the policy is correct; if not I gather the update policy would be effective and I would not receive this message in event viewer:

Unable to connect: Windows is unable to connect to the Automatic Updates service and therefore cannot download and install updates according to the set schedule. Windows will continue to try to establish a connection.

The SUS server has the following event viewer warning:  
The server was unable to logon the Windows NT account 'IUSR\_SUSTEST' due to the following error: Logon failure: the user has not been granted the requested logon type at this computer. The data is the error code.

As you mentioned in previous post the rights and permissions are as stipulated in article:  
<http://support.microsoft.com/?id=271071>

Thanks again  
Mitch
