Hello,

I was attempting to secure my Windows 2000 Server by disabling unnessesary services, like file and printer sharing, RPC calls, etc. Since I disabled these services I cannot get a Properties page to open from the MMC. I

t never loads, but then if I try to close the MMC it says "You must close all dialogue boxes first". There is no dialogue box for me to close so I have to use the task manager to close it manually.

I need IIS on this computer, and I think one of the services I disabled was an IIS dependency. What is the full list of IIS dependencies? World Wide Web Publishing Service is disabled and when I try to start it I get an error message:
"Could not load the World Wide Web Publishing Service on Local Computer.

Error 1068: The dependency service or group failed to start".

I tried starting IIS admin and got the same error.

This is really urgent, so I would appreciate any help anyone has.

Thank you so much
