Two things.

When I try to connect with a standard Port 80 I get:

The page must be viewed over a secure channel

The page you are trying to access is secured with Secure Sockets Layer (SSL).

---

-----  
----

Please try the following:

a.. Type `https://` at the beginning of the address you are attempting to reach and press ENTER.

HTTP Error 403.4 - Forbidden: SSL is required to view this resource.  
Internet Information Services (IIS)

---

-----

Technical Information (for support personnel)

a.. Go to Microsoft Product Support Services and perform a title search for the words HTTP and 403.

b.. Open IIS Help, which is accessible in IIS Manager (inetmgr), and search for topics titled About Security, Secure Sockets Layer (SSL), and About Custom Error Messages.

With a `https://>/exchange` Port 443

The page cannot be displayed

The page you are looking for is currently unavailable. The Web site might be experiencing technical difficulties, or you may need to adjust your browser settings.

---

Please try the following:

a.. Click the Refresh button, or try again later.

b.. If you typed the page address in the Address bar, make sure that it is spelled correctly.

c.. To check your connection settings, click the Tools menu, and then click Internet Options. On the Connections tab, click Settings. The settings should match those provided by your local area network (LAN) administrator or Internet service provider (ISP).

d.. If your Network Administrator has enabled it, Microsoft Windows can examine your network and automatically discover network connection settings.

If you would like Windows to try and discover them,

click Detect Network Settings

e.. Some sites require 128-bit connection security. Click the Help menu and then click About Internet Explorer to determine what strength

microsoft.public.inetsrvr.iis.security: Re: Help!!! with a Trial SSL Cert

security you have installed.

f.. If you are trying to reach a secure site, make sure your Security settings can support it. Click the Tools menu, and then click Internet Options. On the Advanced tab, scroll to the Security section and check settings for SSL 2.0, SSL 3.0, TLS 1.0, PCT 1.0.

g.. Click the Back button to try another link.

Cannot find server or DNS Error

Internet Explorer

This are the two messages
