I understand what u are saying, but URLscan will not intercept that command yet as IIS will still respond to an OPTIONS and TRACE command even with it disabled.

I have tried all ways, but even though it is truley diasabled and I know there is not compromise, if I go and give an OPTIONS command or a TRACE command, IIS will respond.

Trace and track are the same command?

this only presents a problem when present security test results to a management board and they ask why we are getting a false failure when using a outside security org to check the firewall and webserver.
