Hello,

When accessing web sites, I get this error lately:  
explorer.exe caused an error and will close!! (I have the latest version of IE though) I also open task manager very fast in time to see SPYFADER running?! my question is this: since I never personally downloaded any program or anything with SPYFADER name on it, is this a spyware program or part of one of my spyware/spybot/ or ad-aware programs which I do have! Thanks very much for some kind of response, will be really appreciated! :-)

Marie.
