OK, I will bite.

Is there some reason that you believe the certificate for the website known in the metabase as w3svc LM 4 is NOT (expired or not yet valid) ??

<vecozo@xxxxxxxxxxxxxx> wrote in message news:BD927930-0B68-45D4-9259-049E19266010@xxxxxxxxxxxxxxxxxxxx

Hello,

We have three environments test, acceptance and production. On the test and production environment everything works fine, but acceptance is something different. So you should say make acceptance the same as test and production. So I did but it still doesn't work.

When I open my webservice in my browser I get the dialog box "Choose a digital certificate" this box is empty in acceptance and filled in test and production.

- I set the site to ignore certificates
- I set the webservice to require certificates and require ssl with encryption
- I set the Certificate Trust List

The only error I could find in the event viewer was:

Event Type: Warning
Event Source: W3SVC
Event Category: None
Event ID: 45

Date: 30-3-2006

Time: 12:05:24

User: N/A

Computer: EHC_SERVER01

Description:

The server certificate for instance '4' has expired or is not yet valid.
