Hey Thanks man for the suggestion
After Disabling this it works better, if you have any suggestion..let
me know..Meanwhile if u have any online site where i learn more about
IIS security just past it across. Thanks once again

regards
Philip

Hello
thanks for reply

a) How do you know there is no security?
Well, as mentioned earlier that anyone can access this domain from
anywhere with read and write permissions...

How do you know they aren't sending credentials? Have you checked the
relevant IIS logfiles?

b)Are you allowing anonymous access?
Yes this is a public website

c)Do you have WebDAV enabled in the Web Service Extensions list?
Well Im new to this field so i don't know about this...well where can i
get the info on my machine whether WebDAV is enabled???

Open IIS Manager. There is a node called "Web Service Extensions". Locate
WebDav. Disable it.

Re: HOW TO IIS –Security

If you need more help on securing IIS, I co-wrote a book with Bernard Cheah (another IIS MVP). You can order it from Amazon.com (or any other bookstore):

<http://www.amazon.com/exec/obidos/ASIN/1931836256/adopenstati0f-20>

Cheers
Ken

Hi,

a) How do you know there is no security? Are you allowing anonymous access?

Have you configured NTFS permissions to restrict which users can access

the files?

b) Do you have WebDAV enabled in the Web Service Extensions list? They are

accessing the site via WebDAV by the looks of it – if you have it enabled, you need to take additional steps to restrict who can view what.

Otherwise

disable WebDAV if you don't need that functionality.

Cheers
Ken

Hi!! & Hello!!!

Well I have a server where I have hosted many sites on IIS 6.0. When the users I mean the public users (anyone from anywhere) if they go to their Start->Run-> from windows and type

Re: HOW TO IIS –Security

the IP address(for eg
\\83.485.574.22) like this it opens up the
default site with full
directory view and ...with all the files and
folders. write permission
.how can i stop this ??? i mean their is no
security at all how can i
stop this???

regards
Phil
