Hi Ben,

I saw NTLM works according to the trace. As least, the authentication is passed between IIS and the client. Now it looks like this is probably a Kerberos auth related issue.

Please go to the problematic client, open its IE Internet Options->Advanced, make sure the 'Enable Integrated Windows Authentication' option isn't selected. In this case, IE will use NTLM to perform Integrated auth with IIS instead of Kerberos protocol. See if this will let the SUS site work from now.

If it works, this means Kerberos authentication fails in your domain. You have to ping our Windows AD group to help on Kerberos side troubleshooting. Do you have a proper Kerberos Domain Controller(KDC) set in the domain?

Thanks.

Best Regards,

WenJun Zhang

<http://msdn.microsoft.com/subscriptions/managednewsgroups/default.aspx#notifications>.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best

Re: Network/Web Site Authentication

handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at:
