WenJun,

I followed the steps you listed and that worked great.

SharePoint was installed by someone else and I am unfamiliar with SharePoint administration.

Thanks for including the specific steps.

Leslie

Hi Leslie,

Just as Ken mentioned, when Windows sharepoint service is installed and a site is extended as a WSS site, all the http requests to this site are handled by WSS's ISAPI filter: stsfltr.dll. Therefore you have to either create a new web site to deploy your own web applications or exclude some virtual paths from the WSS site to make them no longer handled by WSS. Then you can deploy your web application to that excluded vdir.

To exclude virtual pathes, please refer to the following steps:

- 1) Browse to SharePoint Central Administration site.
- 2) Click Confifure virtual server settings
- 3) Select the WSS extended site
- 4) Click Define managed pathes
- 5) In "Add a New Path", select Type to "Excluded path", in the Path textbox, input the virtual directory"s name and click OK.

Then the path <http://yourwssserver/vdir/> will no longer be managed by WSS. You can deploy your .net application into it.

Please update here if problem still persists.

Best Regards,

Get notification to my posts through email? Please refer to:

<http://msdn.microsoft.com/subscriptions/managednewsgroups/default.aspx#notifications>.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at:

<http://msdn.microsoft.com/subscriptions/support/default.aspx>.
