What you can try is to not use that specific PC and try to get the program Powerquest "Lost and Found 1.06". This program is able to reconstruct deleted files on the harddrive. This only works when the deleted filespace is not reused. If you want to try this it is important to stop working with windows on that PC until you ran Lost and found.

I wish you good luck with the restore.

Best regards,

Marco van Nieuwenhoven.
