Hi Soren,

It seems that this is an Application Integration Framework question, so I do not think you will get much useful responses in microsoft.public.platformsdk.security newsgroup. As you may have noticed, microsoft.public.axapta is more suitable for it. Note: microsoft.public.axapta is not a MSDN managed newsgroup, so you will not get official MSDN newsgroup support in it.

Anyway, I would like to share some of my security experience with you. From platformsdk security perspective, I recommend you to use Process Monitor to monitor the file system access of your application process. If it is permission related, you may take care of records with "Access is denied" result. Also, you may filter the log records with your folder path. You may download Process Monitor from the link below:
<http://www.microsoft.com/technet/sysinternals/utilities/processmonitor.mspx>

If you are not familiar with Process Monitor, Mark Russinovich has provided an online video regarding it:
"Advanced Windows Troubleshooting with Sysinternals Process Monitor"
<http://www.microsoft.com/emea/itsshowtime/sessionh.aspx?videoid=346>

Hope it helps.

Best regards,
Jeffrey Tan

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations

RE: AIF Filesystemadapter will not write to folder

that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
