did a stupid thing yesterday and opened an email from allegedly microsoft saying it was a security patch download. After downloading and installing I received the worm swen.a virus and I can't get rid of the damn thing. I have run PC Cillin 2003 which gave me the name of the virus but it cannot quarantine it. I have downloaded and installed the worm blaster patch and the XPKB824146 patch re booted a number of times but no good. PCCillin recommend I stop internet traffic but to do that I can't sort this out. PLEASE HELP ANYONE
