Recomendations for removing the Stealth_Boot virus is to create a virus free boot disk and scan disk. After booting at he A:\prompt you are to execute the following command:
BOOTSCAN C:/boot/clean

I need to know how to create such a boot disk for W2000. Whe I try booting from a DOS 6.22 disk and running the command I get the message "Unable to initialise XMS" and the virus seems to remain. I am hoping someone out there has already had to clean this virus and can help me out.

Thanks -R
