You really are a glutton for punishment... Having you ever considered backing it in. If your intent is to lure newbie's, you've got quite a job on your hands in this forum, and I would suspect all the other's, since hopefully they read the slams that you get, and realize that everyone else's arguments have more validity. If your other reason is to sell your book, I can't imagine you're going to have any luck. Most everyone here seems to be annoyed at your post's, so why do you keep it up? At some point I would think you would get tired of it and give up. I must say, you are tenacious, but I don't think in this respect it's a quality that anyone would want to possess.

When you write do you follow the critical necessity of evaluating for credibility? I've read some of your book excerpts and can't find the necessary claims supported with evidence, where the evidence was obtained, or that you are knowledgeable on the subject. With out these things, writing is nothing but characters on a page.

Pam
